

Smart Chambers

Reinventing your judicial time off workflow

Smart Chambers was inspired by the ever increasing shift from paper to computers within the American Judicial System. With eFiling and remote appearances now becoming the norm across the nation, one area was seemingly left behind, time off management. A human always needed to find an available judge to hear the missing judge's court call. This usually entails sifting through a pile of papers, checking that the backups aren't absent themselves. Smart Chambers automatically assigns a backup after checking to make sure that judge is available, completely removing the need for human checks.

Feature List

- Two click time off request
- Approve, deny or manage existing time off info
